

Amendments to the Claims

1. (Currently amended) A rubber composition or its crosslinked product used for a rubber stopper for a medicament or a rubber article for a medical treatment, comprising an isobutylene copolymer, as a predominant component, ~~with~~ wherein the rubber composition or its crosslinked product has a density of at most 0.95, ~~capable of being and can be~~ readily subjected to a radiation treatment.

2. (Original) The rubber composition or its crosslinked product, as claimed in claim 1, wherein the isobutylene copolymer, as a predominant component, is at least one member selected from the group consisting of isobutylene-isoprene copolymers (IIR), chlorinated isobutylene-isoprene copolymers (C-IIR), brominated isobutylene-isoprene copolymers (B-IIR), crosslinked isobutylene-isoprene-divinylbenzene ternary copolymers (XL-IIR) and brominated isobutylene-para-methylstyrene copolymers (BIMS).

3. (Currently amended) A method ~~for the~~ of treatment comprising applying a radiation to a rubber composition comprising an isobutylene copolymer, as a predominant component, with a density of at most 0.95 and thereby carrying out crosslinking of said composition or sterilization of the crosslinked product thereof.
